

How CleanCore Helps Against COVID-19

How CleanCore Solutions Can Help During the Pandemic

According to the CDC, the proper way to protect your environment is to properly clean the environment prior to disinfecting it. Disinfecting without first cleaning with a solution like Aqueous Ozone, is not sufficient.

CleanCore Solutions™ Aqueous Ozone (AO) technology creates the cleaning industry's most effective all-purpose cleaner. Pure Aqueous Ozone offers an effective and natural cleaning and deodorizing solution for all-surface cleaning.

Protecting Public Places

The CDC has provided specific protocols to clean and disinfect public places such as hospitals, schools, office buildings, airports and others.

CLEAN - refers to the removal of germs, dirt, and impurities from surfaces. Cleaning does not kill germs, but by removing them, it lowers their numbers and the risk of spreading infection.

DISINFECT - refers to using chemicals to kill germs on surfaces. This process does not necessarily clean dirty surfaces or remove germs, but by killing germs on a surface after cleaning, it can further lower the risk of spreading infection.

According to the CDC, combining certain products (such as chlorine bleach and ammonia cleaners) can result in serious injury or death.

CleanCore Solutions™ Aqueous Ozone (AO) technology creates the cleaning industry's most effective all-purpose cleaner. CleanCore Solutions™ provides an on-demand, easy to use, no rinse application to quickly clean surfaces and remove odors. CleanCore's™ patented technology creates a cleaning solution that contains a high concentration of dissolved ozone in the form of Nanobubbles.

Pure Aqueous Ozone provides a GREEN and SAFE cleaning solution to quickly clean and deodorize any surface
